

PACLOCK™

“200” STANDARD REKEYABLE SERIES

PACLOCK's "200" Series padlocks offer superior security with three body styles to choose from. Our "200A", "200" & "250" Series padlocks are precision CNC'd for quality and dependability.

The "200" Series is manufactured from steel that is hardened and then nickel-plated for extreme toughness and resistance to the elements. The "200A" padlock is machined from 6061 Aircraft Grade Aluminum, and then anodized with one of ten available colors. The "250" Series padlock has a nickel-plated brass body that is designed specifically for the harshest elements. It is also ideal for heavily corrosive environments!

The "200A", "200" & "250" come standard with 6-pin bump and pick resistant cylinders! Each lock features a non-key retaining brass actuator and dual locking ball bearings. With our design, PACLOCK significantly reduces the ability for the lock to be shimmed and pulled! PACLOCK provides key retaining options ensuring your padlock gets locked!

The "200A", "200" & "250" Series comes standard with a 1-3/16" hardened steel shackle. With PACLOCK's quick change shackles, you can easily adapt your padlock to any application with a turn of a wrench. Change the shackle height or type to meet your needs. Take advantage of PACLOCK's multiple shackle options!

With "Your Logo, Your Locks"™ program, take advantage of engraving on either your aluminum or brass locks! This is a great way to maintain brand continuity or to provide contact information for lockout zones!

Don't limit what you can protect! PACLOCK provides multiple keying options so that you can give direct access to people you can trust. With multiple keying options available, lockup or lockout heavy equipment, zones, and access points.

If you have any questions or concerns about our products give us a call at 661.294.3707 or visit us on the web at www.paclock.com.

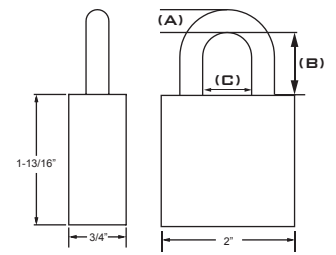

PRODUCT NUMBER	BODY TYPE	DESCRIPTION/SPECIFICATION	SHACKLE DIMENSIONS
