

PACLOCK™

“90” STANDARD REKEYABLE SERIES

PACLOCK's 90 Series padlocks are light weight and versatile. Our “90A”, “90” & “95” padlocks are precision CNC'd for quality and dependability.

Every “90A” is machined from 6061 Aircraft Grade Aluminum, and then anodized with one of ten available colors. Our “90” Series is made from hardened steel and then electroless nickel-plated to resist corrosion. The “95” Series padlock is a solid brass body padlock that is designed specifically for the harshest elements. It is also ideal for heavily corrosive environments!

All of the “90” Series come standard with 6-pin bump and pick resistant cylinders! Each lock features a non-key retaining brass actuator and dual locking stainless steel ball bearings. With our design, PACLOCK significantly reduces the ability for the lock to be shimmed and pulled! PACLOCK provides key retaining options ensuring your padlock gets locked!

The “90” Series comes standard with a 1-3/16” hardened steel shackle. With PACLOCK's quick change shackles, you can easily adapt your padlock to any

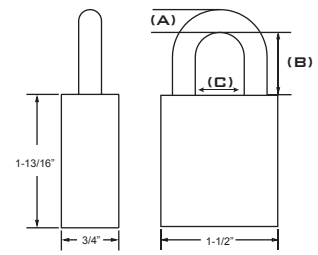

application with just a turn of a wrench. Change the shackle height or type to meet your needs. Take advantage of PACLOCK's multiple shackle options!

The “90A” padlock is ideal for “safety lockout” and is available with ten colors from which to choose. Custom engrave serial numbers and logos for zoning and identification. Don't limit what you can protect! PACLOCK provides multiple keying options so that you can give direct access to people you can trust. With multiple keying options available, lockup or lockout heavy equipment, zones, and access points.

With “Your Logo, Your Locks”™ program, take advantage of engraving on aluminum or brass locks and even black powder-coated hardened steel! This is a great way to maintain brand continuity or to provide contact information for lockout zones!
