

PACLOCK™

“900” EXTREME SECURITY STANDARD REKEYABLE SERIES

PACLOCK’s “900A” and “900” Series padlocks are heavy duty and provide high security. All of our padlocks are precision CNC’d for quality and dependability.

The “900” Series is manufactured from hardened steel and is then electroless nickel plated for extreme toughness and resistance to the elements. The “900A” Series is machined from 6061 Aircraft Grade Aluminum, and then anodized with one of ten available colors. Lightweight and versatile, the “900A” is ideal for both marine and industrial applications.

The “900A” and “900” padlocks come standard with 6-pin bump and pick resistant cylinders! Each lock features a non-key retaining brass actuator and dual locking stainless steel ball bearings. With our design, PACLOCK significantly reduces the ability for the lock to be shimmed and pulled!

The “900A” and “900” Series comes standard with a 1-3/16” hardened steel shackle with a 7/16” diameter for extreme security against bolt cutters. With

PACLOCK’s quick change shackles, you can easily adapt your padlock to any application with a turn of a wrench. Change the shackle height to meet your needs.

With “Your Logo, Your Locks”™ program, take advantage of engraving on your aluminum locks! This is a great way to maintain brand continuity or to provide contact information for lockout zones!

Don’t limit what you can protect! PACLOCK provides multiple keying options so that you can give direct access to people you can trust. With multiple keying options available, lockup or lockout heavy equipment, zones, and access points.

If you have any questions or concerns about our products give us a call at 661.294.3707 or visit us on the web at www.paclock.com.
