

PACLOCK™

*CYLINDER NOT INCLUDED

“KIK-900” SERIES

PACLOCK's "Kik-900" Series padlock is an industry first! The world's toughest shackled padlock is finally mated with the world's most ubiquitous cylinder ~ the Key-in-Knob. This combination provides customers with the preeminent security solution. Combine the "Kik-900" with high security cylinders from Medeco®, ASSA®, Schlage® and many others. Or simply use your standard Kwikset® house cylinders in these padlocks ~ either way, it's your option!

The "Kik-900" Series padlock is precision CNC'd in the USA for quality and dependability. Once the extruded solid steel is machined, it is then case hardened for maximum drill and cut resistance. The body is then electroless nickel plated for extreme toughness and resistance to the elements.

PACLOCK's "Kik-900" is the industry leader in extreme shackled security by withstanding head on attacks from boltcutters and hacksaws! This padlock is ideal for locking up high security locations such as heavy machinery and equipment.

The "Kik-900" ships with all of the parts necessary to install your Key-in-Knob or Key-in-Lever cylinder. Select either one of three available drivers depending on the type of cylinder you intend to install. The lock ships standard with a non-key retaining brass actuator and dual stainless steel locking ball bearings. This ball bearing design makes the "Kik-900" impervious to the "shim attack" while, at the same time, offering a very easy open and close operation.

The "Kik-900" has an optional key retaining feature that offers a higher level of security by ensuring your padlock cannot be left unlocked. The "Kik-900" Series comes standard with a 1-3/16" case hardened steel shackle that is nearly half an inch thick! Taller shackle heights are available to meet your needs.
